About

Highly experienced and motivated Senior Full Stack Software Engineer with over 7 years of expertise, specializing in Identity and Access Management (IAM) and authentication systems. Passionate about building impactful software solutions, I bring both technical excellence and positive energy to every team I work with, whether remotely or on-site.

My core focus lies in enterprise security and system integration, with a proven track record of successfully leading and delivering projects for major clients. I specialize in designing robust, scalable software architectures and driving end-to-end development, always ensuring alignment with business objectives.

Beyond my professional role, I actively engage with the broader tech community. I have earned multiple certificates and badges, ranking in the top one-percent on platforms like Upwork, and I contribute as an instructor on Coursera for topics including Java and DevOps. I continuously explore emerging technologies, contribute to open-source projects, and build meaningful connections within developer communities staying at the forefront of the evolving tech ecosystem.

I bring deep expertise in modern engineering practices and methodologies. Known for being positive, patient, and highly autonomous, I thrive in collaborative environments, enjoy mentoring and knowledge sharing, and remain committed to continuous learning and growth in this fast-paced industry.

Experience

Amundi <i>Security Senior Software Engineer</i>	Sep 2025 – Present <i>Paris, France</i>
Proxym France <i>Senior Full Stack Developer</i>	Sep 2024 – Aug 2025 <i>Paris, France</i>
Upwork <i>SSO OIDC/SAML Specialist</i>	Apr 2024 – Present <i>Remote</i>
Proxym IT <i>Java Technical Lead</i>	Aug 2019 – Aug 2024 <i>Sousse, Tunisia</i>

Projects

Amundi <i>Security Software Engineer</i> After just one year in France, I seized the opportunity to return to the banking and finance sector, combining my previous experience with newly acquired knowledge to become a valuable team member at Amundi, Europe's largest asset management company. As part of a key initiative to strengthen security across multiple investment platforms, my primary responsibility was to implement multi-factor authentication (MFA) and contribute to the consolidation of various portals into a single, centralized, and highly scalable IAM. • Played a transversal role throughout the entire mission, acting as the lead representative for authentication and authorization. Collaborated closely with all Amundi ESR teams to ensure smooth integration, foster positive communication, and efficiently gather requirements and specifications with PMOs. Defined configuration standards and ensured all platform portals were properly set up for secure 2FA implementation. • Implemented a FIDO-compliant authentication server for managing passkeys, supporting platforms with a user base exceeding 5 million users while maintaining zero production downtime. • Been transversal during all mission contract. to be the head of authentication and authorization representative and integrate easily with multiple teams to assure positivity and gather requirement and spcification easily with PMO's and leads configuration standards and ensure each platform's portal was properly configured for secure 2FA implementation. • Worked on adapting and integrating a flexible, user-friendly OAuth2 framework with compliance with OIDC RFC's in scalable way, with a focus on enhancing security without sacrificing accessibility.	Sep 2025 – Present <i>Paris, France</i>
---	--

- Took responsibility for ensuring the full migration of the user base from a legacy LDAP system. lacking even CLI lookup capabilities—to Keycloak, establishing a centralized authentication system and preventing long-term identity management maintenance issues.

Technologies : *Javascript, Typescript, Java, OIDC, WebAuthn, TOTP, OTP, MFA, OAuth2.0, Nx, React, Angular, JEE, NextJS, NodeJS, Spring Boot, Spring JPA, Keycloak*

Ogment

Dec 2025 – Apr 2026

Senior Software Engineer – Authentication and Identity

Full Remote

Ogment is an MCP-powered platform offering a wide range of MCP servers, with capabilities including chat, automated MCP development, code execution, and security.

This experience demonstrates my ability to manage multiple projects efficiently while staying actively engaged across diverse technologies. While working full-time on my primary projects, I was approached by a client who recognized my expertise and requested my involvement in their product.

Leveraging my knowledge of authentication, AI, and MCPs, I contributed to the system design and implementation. I was subsequently offered a part-time role, where I ensured seamless B2B and B2C integration of authentication systems within MCP environments.

- Working in new environments and understanding strong business contexts enables me to quickly grasp new concepts and engage confidently with team members.
- Defined the scope of work, timelines, and commitments with the client from the outset. Maintained efficient communication and collaboration with team members, ensuring consistent product updates and alignment with project goals, even when not always available.
- At a time when MCP OAuth was still a new concept, I began by developing a strategy to deliver a proof of concept (POC) that integrated all the client's ideas. The solution leveraged multiple AI agents to minimize costs for the client while ensuring alignment with real business requirements, which were then incorporated into the application.

Technologies : *Keycloak, Okta, Active Directory, Clerk, LDAP, Google Workspace, IAM , OAuth2, OIDC, SAML , Javascript, Turbo, NextJS, Supabase, Fly.io, Cloudflare, Github*

Moncler

Dec 2024 – Dec 2025

Senior Full Stack Developer

Paris, France

Continuing to grow in a fast-evolving field, I became deeply interested in integrating AI into my work. Leveraging my strong programming background with newly acquired technologies, I developed an AI-powered system for managing e-commerce product descriptions. The solution is both highly scalable and fully AI automated, designed to support multiple retailers. Insure not only product development and maintenance. as well as insuring delivery and execution with Moncler.

- Introduction to prompt engineering and fine-tuning to interact effectively with the OpenAI API, ensuring relevant responses and reliable detections in the context of classification features.
- Quickly adapt to new backend programming languages to strengthen and expand my expertise, with constant attention to writing clean code and the importance of unit and integration testing.
- Follow on daily updates and provide suggestions that was taken into production systems as knowledge and memories management for the LLM, .

Technologies : *Python, Quart, Flask, React JS, MemOS, Next JS, OpenAI, LiteLLM, Neo4J, GitLab, Azure, Terraform*

BICICI Bank

Oct 2023 – Nov 2024

Java Technical Lead

Sousse, Tunisia

BICICI is a leading financial institution in Ivory Coast, providing a wide range of banking services to individuals, businesses, and both public and private organizations.

Took the leadership to the complete redesign of the bank's core system from scratch. This effort was launched significant performance issues identified in production, particularly related to open-source BPMN components.

The main challenge was to analyze and resolve critical production bugs while ensuring zero downtime, all under high client pressure and strict reliability requirements.

- Minimized unused data, Implemented data pagination, added caching layers. and extended third party dependencies by adding customized SPI to enhance response time from production databases.
- Partnered with a high-performing team of five developers to drive exceptional code quality and successfully launch new features and enhancements.
- Refactored legacy codebase by applying principles from the Gilded Rose kata: isolated business rules, introduced unit tests to cover critical paths, and incrementally decoupled responsibilities to improve maintainability.

- Analyzed existing source code, opened internal dependencies to improve integration, enhance site performance during peak times and reducing system failures by 80 %.

Technologies: *Java, Spring Boot, Keycloak, Spring Security, OIDC, Typescript, Javascript, React, FormIO, Kubernetes, AWS, PostgreSQL, BPMN, MyBatis, Flowable, GitLab, Keycloak*

RTA Dubai

Nov 2021 – Oct 2023

Senior Java Developer

Dubai, UAE

I took on an early career challenge by relocating to a new country and working closely with enterprise clients as a delivery lead. I contributed to multiple projects within the Dubai government, primarily with the Dubai Roads and Transport Authority (RTA), and secondarily with Dubai Police.

For Dubai Police, I was responsible for debugging issues and reporting on the operational status of police patrol systems. At the same time, I managed the full SDLC for RTA projects, mainly “RTA One” application widely used by Dubai residents and visitors which provides access to a broad range of integrated third-party services.

- Defining the architecture of micro-services, Monitoring and maintenance of the project of the backend infrastructure ensuring consistency across the team.
- Implement & Configure monitoring and logging solutions to track performance, availability, logging, and security of the deployed environment
- Setting up secure client configurations for various microservices with external systems. This involves supporting SOAP and REST protocols by configuring SSL/TLS, managing certificates, and ensuring secure data transmission via HTTPS.
- Contributing to defining the pipeline, actively collaborating with the client's technical team to facilitate deployment in the production environment, and assisting in configuring the Docker Swarm environment.
- Handling support requests and production interventions. Code Reviews & Guidance of team members through features development.
- Enforced code coverage thresholds to ensure high code quality and maintainability while implementing test segregation in the CI pipeline, applying TDD for unit tests, BDD for domain-driven scenarios, and integration testing for system-level validation.

Technologies : *Spring Cloud, Spring Boot, Spring Gateway, Spring Webflux, Netflix Eureka service registry, Spring Cloud Config, Spring Web Services, Spring Security, Spring Data, Spring JPA, Hibernate, SQL, Java 17, Kafka, Grafana, Docker Swarm, Redis, Oracle DB, SOAP, REST, Gitflow, Maven, AppDynamics, Jenkins, GitLab*

OPEC FUND

Aug 2019 – Sept 2021

Full Stack Developer

Sousse, Tunisia

The Web and Mobile Client Portal of the OPEC Fund (OCP) is an omnichannel solution built on the Proxym Bankerise© platform. It enables the Fund to streamline and automate the management of its financial resources, while providing beneficiaries (governments, organizations, etc.) with a secure digital space to monitor and manage loans and grants.

Operating in an international environment with strict regulatory constraints and country-specific configuration requirements, the project is organized into a feature team of 13 members and follows an agile methodology based on the Scrum framework.

Initially joining as a Java Developer, I progressively expanded my role across subsequent sprints to contribute to frontend implementation. I also became a key point of contact for the PMO, actively supporting continuous business changes and participating in direct technical discussions with stakeholders.

- Contributed to the client systems, enhancing capabilities within the systems to ensure seamless and dynamic integration via HTTP calls with our Spring server.
- Proactively collaborated with over a dozen professionals, including PhDs, architects, and senior experts. Led numerous meetings with the client team to outline technical issues encountered and illustrated proposed solutions using small Proof of Concepts (POCs).
- Provided expertise across all parts of the application, contributing to and modifying continuous deployment and integration pipelines to various environments (Dev, QA, Staging, Prod), along with testing, code analysis, and security audits.
- Contributed to all features of the application, from backend to the administrative interface, developing reusable tools and abstract layers. Simultaneously, I had several tasks to accomplish on the client side for both Web and Mobile in an Angular/Ionic project.
- Packaging the entire application with all necessary configurations using Docker for streamlined local development.

Technologies : *Java, Spring Boot, Maven, AWS, SQL Server, ADFS, Keycloak, Entra ID, OIDC, MFA, TOTP, Kubernetes, Docker, Angular, Ionic, GitLab, Primefaces, Elasticsearch, Redis, Oracle, PL/SQL*

Education

International Multidisciplinary School of Sousse	2019
<i>Engineering Degree in Computer Science</i>	<i>Sousse, Tunisia</i>
Higher Institute of Applied Sciences and Technology of Sousse	2016
<i>Admission to the Integrated Preparatory Program with admission to engineering cycle</i>	<i>Sousse, Tunisia</i>
Sayada Secondary School	2014
<i>Baccalaureate Diploma in Mathematics</i>	<i>Monastir, Tunisia</i>

Languages

English: Fluent
French: Fluent
Arabic: Native

Certification

2023: Java Oracle 11 SE Professional 1Z0-819
2026: Top Rated Plus — Top 1% Freelancers .

Technical Skills

Backend Programming languages & Frameworks: Java, Javascript, Python, Spring Boot, Spring MVC, NextJS, NodeJS ,
Quart
Frontend: Javascript, Typescript, JSF , Primefaces, JSP , React , Angular
Devops & CI: Azure , AWS , Docker , Kubernetes, Jenkins, Git, Gitlab, Github
Tools: Nx, Turbo, Gradle, Maven, Conda
Database: MySQL, PostgreSQL, Oracle DB, SQL Server, MongoDB , Elasticsearch
Methodologies: DDD, TDD, SOLID Principles, BDD , Design Patterns, Agile, UML
